

Why You Need Omega-3s

NEW RESEARCH

EPA + DHA = The two most beneficial marine-based omega-3s

Omega-3s - particularly EPA and DHA - are important for overall health, including heart health. Most people do not get enough EPA and DHA omega-3s, and new research suggests you may need even more than you think. Here's why:

According to new research published in *Mayo Clinic Proceedings*, **EPA and DHA omega-3s are associated with improved heart health.**

Reduced risk of **fatal myocardial infarction** (heart attack)

35%

Reduced risk of **heart attack**

13%

Reduced risk of death from **coronary heart disease**

9%

Your goal should be at least 1000 mg of EPA + DHA per day.

Dietary/food supplements, prescription omega-3s and eating fish regularly will help you meet this goal.

Talk to your healthcare provider about getting more EPA and DHA omega-3s.
